

MAINTENANCE REPAIR & OVERHAUL

All the Ulmer equipments have "Easy Maintenance" cycles depending on type of products, customers oxygen team requirements and trainings within Ulmer training centers.

Up to 30 months inspection cycles and 60 months service cycles.

The ULMER Maintenance Repair & Overhaul (MRO) can be operated in different ways depending on customer requirements.

From full MRO provided by ULMER team within its french facility up to full MRO provided locally by customers' technical team after full training within Ulmer training centers.

ULMER also provides technical advices to customer for installation and "certification" of oxygen lab to allow customers' technical team to provide full MRO locally.

ULMER also designs and manufacture mobile oxygen test bench, altitude chamber and full sets of special tools for full oxygen systems testing during MRO operations.
